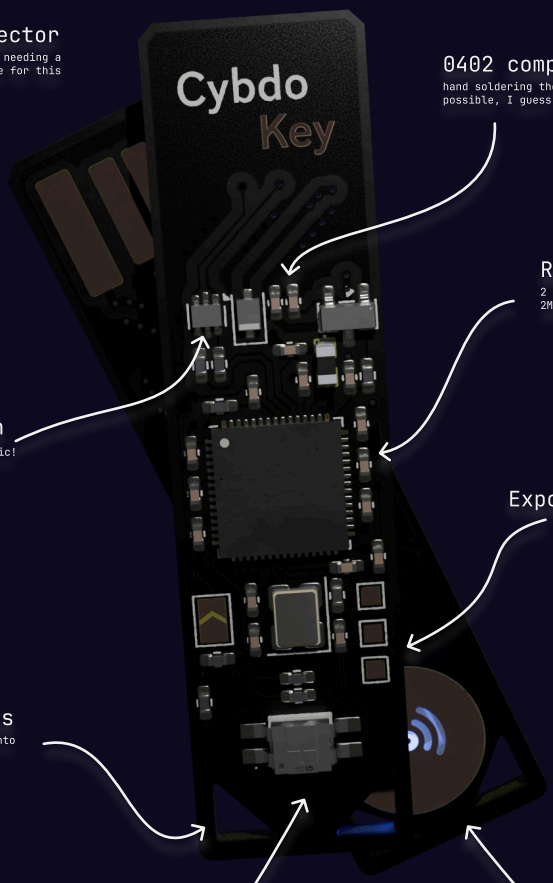
CybdoKey

A RP2354-based hardware authentication key

By Ryan (@cybdo), an Australian 16 y/o



USB-A connector
Imagine needing a dongle for this

0402 components
hand soldering theoretically possible, I guess

RP2354 MCU
2 ARM and 2 RISC-V cores!
2MB inbuilt flash!!

USB Protection
TVS to protect against static!

Exposed testpoints
3V3, GND, RESET and BOOTSEL, all easily accessible!

Keyring holes
Or lanyards if you're into that.

Github QR

R(G)B LED
Shines through the PCB without an ugly hole in it!
(only red and blue are wired)

Capacitive touch
So much better than a tiny, clunky finnicky physical button!!
